

6"

Adjust cable length before hanging for less in-air adjustment. The rigging point adds 6" to your overall cable length.

*Use the Felco snippers to trim messy cable ends for easier verlock insertion. Trim about 1" from the end for a clean cut.

*Hang from the top cord of your truss to get a tighter truss clearance.

*Ground supports are available for smaller screens.

Use the verlock to adjust from bottom. Coil excess aircraft cable and secure the coil to itself with E-Tape.
